

Grant Opportunities & News You Can Use

Hello, faculty,

I hope you’re enjoying the warming weather. We are back with our March edition of our Grant Opportunities newsletter.

This month, we are covering the Alfred P. Sloan Foundation in our [Featured Funder](#) column. For our [Sage Advice](#) column our student worker, Nicole Heyward (class of ‘22, economics), has put together a helpful guide on applying to the NSF as a collaborative proposal. And for our new column, [The History of Philanthropy](#), we are staying in the Middle Ages and looking at the rise of Mortmain Laws, or “Dead hand laws.” Why such a spooky name? Read on to find out.

As always, we have upcoming deadlines, this time for May. I want to highlight the upcoming [NEH Fellowship](#), which is due April 14. Some colleagues who work at other small liberal arts colleges have put together a webinar where winners from their colleges discuss the application. You can see it [here](#).

The next [Internal Grant deadline](#) is April 6, 2021. That applies to Barnard Faculty Research Grants, as well as the Fund for Innovation in Teaching Grants.

If you need assistance finding grants or beginning an application, please feel free to email any of the members of the [Institutional Funding and Sponsored Research](#) team. We love to hear from you!

The Alfred P. Sloan Foundation

In the [thumbnail photo](#) that accompanies Alfred P. Sloan's Wikipedia photo, he has his right arm propped against the back of a chair and he is using it to hold up his head, while his hooded eyes look down and slightly to the right. His tie is sagging out from his three-piece suit, his eyebrows are contracting, and his jaw is slack. It's the photo of a pensive man, exhausted and maybe a little regretful.

I started with this photo because it's hard to get a sense of who Alfred Sloan was from written sources (or at least those easily available on the internet). We know that he was born in 1875 the first of five children to a housewife and a machinist who happened to co-own a tea import company. We know he married young and stayed married, though he never had children. We know that he was smart, with a knack for business that made him president of General Motors in 1923 and General Motors one of the leading car manufacturers at the time of his death in 1966. We know that he despised the union-busting violence contemporaries like Henry Ford used, though he was perfectly willing to insert spies into troublesome worker organizations. And we know that he prized efficiency.

As for his personality, the Sloan Foundation website describes him as "a realist as well as a humanist and philanthropist." That may be true, but investigations after World War II also paint a less flattering picture of Sloan. In 1931, GM acquired Opel, a major manufacturer in Germany. Sloan claimed that company was soon nationalized and its American businessmen replaced with loyal Nazi officials, but Nazi armament official Albert Speer reportedly claimed that "["would never have considered invading Poland' without synthetic fuel technology provided by General Motors."](#)

GM's collaboration of the Nazis remains a contentious topic, but the historical record reveals that Alfred Sloan was, at minimum, not terribly worried about stopping involvement with the Nazi government. In [a letter to GM's Board](#) written in March 1939, Sloan insisted that the internal politics of Germany "should not be considered the business of the management of General Motors...We must conduct ourselves as a German organization...We have no right to shut down the plant."

Today the [Alfred P. Sloan Foundation](#) "support[s] original research and education related to science, technology, engineering, mathematics, and economics." They have a number of fellowships and grants, including the following:

["The Sloan Research Fellowships](#) seek to stimulate fundamental research by early-career scientists and scholars of outstanding promise...Candidates must hold a Ph.D. or equivalent degree in chemistry, computer science, Earth system science, economics, mathematics, molecular biology, neuroscience, physics, or a related field." Funding: \$75k. Deadline: September 15, 2021.

[Economic Institutions, Behavior, & Performance Grants](#) "support rigorous and objective research projects on U.S. economic structure, behavior, and performance whose findings inform and strengthen decision-making by regulators, policymakers, and the public." Deadline: Rolling.

[Energy and Environment Grants](#) seek to "inform the societal transition toward low-carbon energy systems in the United States by investigating economic, environmental, technological, and distributional issues." Deadline: Rolling

The [Public Understanding of Science, Technology & Economics](#) Program aims to give people a keener appreciation for the increasingly scientific and technological world in which we live and to convey some of the challenges and rewards of the scientific and technological enterprise." Deadline: Rolling.

Sage Advice

When to Submit a Collaborative NSF Proposal

Note: Today's column is written by our student worker, Nicole Heyward, class of 2022, economics major.

Have you ever wondered about what makes a collaborative proposal at the NSF? Collaborative Proposals at the NSF are ones in which investigators from two or more organizations hope to collaborate on a single project.

Proposals can be submitted in two ways:

- **A single proposal** requesting a single award. For a single proposal, one investigator is designated as the lead investigator and submits a “single, focused proposal,” with collaborators listed as subawardees. The lead investigator is also responsible for any communication with NSF officials.
- **Multiple proposals** requesting multiple awards. This allows for each organization to submit sections of the proposal relevant to their organization. Proposals can be submitted via FastLane or [Research.gov](#). The project title must begin with “Collaborative Research.”
- While the lead organization and the non-lead organizations both submit proposals, the sections that each submit differ.
- The lead organization submits the project narrative, budget, and other key components.
- The other organizations only submit materials related to their roles, such as C&P, biographical sketches, and budget.

Are there any advantages to submitting multiple proposals?

Yes! In a single proposal with subawards, the single PI is responsible for allocation of all funds, as well as any reporting requirements to the NSF. In a collaborative project with multiple PIs, each organization is responsible for their own reporting and expenditures.

General Guidelines:

- More detailed information on submission is available on [Research.gov](#).
- All components in the collaborative proposal must meet the established deadline date.
- Any postdoctoral researcher mentoring plans must be included in the supplementary .documentation section on FastLane.
- All collaborative proposals--both submitted in a single proposal or in multiple proposals--must clearly delineate the roles and responsibilities of each organization, designate the lead and non-lead organizations, and also explain the advantages of collaboration.

The History of American Philanthropy

[Last month](#) I left our story about the birth of American philanthropy at the invention of the first trust. Two of the three stories were intimately concerned with the medieval English Church. Since there's no American charitable law without the precedent of English charitable law, and no English charitable law without the Crown's struggle with the Catholic Church, I'm going to keep that focus on medieval England a little longer and tell the story of "**The Statutes of Mortmain.**"

The Statutes of Mortmain really grew out of a question that we still struggle with: Should a charitable concern be able to shield wealth from taxation at all and, if so, for how long?

By the thirteenth century, the Catholic Church had started to claim an increasing quantity of land in England. It was enough of an issue that in 1279 King Edward I (sometimes called Longshanks) tried to put a stop to it. Technically Edward I was the second king to try to put a stop to it; his grandfather, King John, had managed to ban the transfer of land to the Church without the approval of the king in the Magna Carta, but he died soon after signing it and the clause was never enforced. It certainly wasn't enforced by Edward's father, Henry III, who was at once feckless and extremely deferential to the Church. Longshanks is today best known for expelling the Jews from England and for sadistically crushing William Wallace in *Braveheart*, but he was probably the most competent of the flailing Plantagenet kings. He was also devoted in the early part of his reign to administrative, legal reform.

He had grounds for stemming the transfer of property to the Catholic Church. Under English law at the time, all the property in the realm belonged to the king. Feudal lords held estates as "*tenants in capite*" or "tenants in chief" to the king, lesser nobility or smaller landholders held smaller estates from the great lords in turn, and so on. Essentially, land was divided in hierarchical stack of estates, with each tenant owing a certain amount service or tax to the person above him.

Even though the king owned the land, the tenants below him still had the right to create new estates and transfer rights to it, and that's really where the problem was. There were two ways of transferring the rights to land, (or "alienating it" in the terminology of the time). A tenant could either sell the estate as is and clear off, or further subdivide it and sell that new estate to someone else, who would then owe them (i.e. the person subdividing it) rent. At some point, savvy peasants realized that they could transfer their lease to the Church and then rent it back from them—this time, with no feudal dues attached. The peasants were obviously happy with the arrangement because they got to work the same land under less onerous conditions and the Church was happy because they now held the property. The king, however, was decidedly unhappy because the bulk of his income came from inheritance taxes and once the Church had possession there *was* no more inheritance.

Why? Individuals could be counted on to die and pass on their wealth with (to us) alarming regularity, but the Church was bigger than any single individual officeholder. In the terms of the day, it was a corporation. That meant that increasing quantities of land were held by a legal institution that could never die, never attain the age of majority, and never have its land seized under the charge of treason. It was as if huge portions of the country were held by a dead man and out of economic circulation forever. That is where the term "mortmain" comes from. It means "dead hand" in French.

Longshanks tried to address the problem twice by issuing the Statutes of Mortmain in 1279 and 1290, which forbade the transfer of land to a corporation without royal permission. The fact that he needed to issue it twice tells you how successful the law was. Still, the Statute of Mortmain isn't a simple historical curiosity. For one thing, early American courts would draw on mortmain laws when ruling about the legality of trusts. More importantly, though, the question of why wealth should be out of reach of taxation and for how long is one that critics of American philanthropy still raise today.

Now Available in Research.gov: Three New Proposal Types and Proposal Withdrawal Functionality

Posted on January 7, 2021

“Effective March 22, the National Science Foundation (NSF) enabled three new proposal types in the Research.gov Proposal Submission System and in the recently launched Research.gov Proposal Preparation Demo Site. These are the Facilitation Awards for Scientists and Engineers with Disabilities (FASED), Equipment, and Travel proposal types. New automated compliance checks and associated error and warning messages for these proposal types were also implemented. In addition, proposal withdrawal functionality was added for both single submission (with or without subawards) and separately submitted collaborative proposals from multiple organizations. New training resources have also been added to the Research.gov [About Proposal Preparation and Submission](#) page.” <<more>>

US health agency will invest \$1 billion to investigate ‘long COVID’

From *Nature* by Staff. Posted on March 04, 2021

“The United States has announced that it will

spend big on research into ‘long COVID’ — the long-lasting health effects of a SARS-CoV-2 infection. The funding comes as the scientific community is just starting to recognize the impact of the condition and unravel why it occurs. On 23 February, the US National Institutes of Health (NIH) announced an initiative worth US\$1.15 billion over four years to fund investigations of the condition, and listed some first priorities.”

NIH Head Apologizes for Structural Racism in Biomedical Research

From *Bloomberg Law* by Jennie Baumann. Posted on February 26, 2021

“Francis Collins apologized for structural racism that has sidelined Black and other disadvantaged scientists in biomedical research and vowed to make changes. An analysis found that while the number of Black scientists who applied for and received NIH grants jumped significantly in the past seven years, that number is still a small proportion of the overall scientific pool. In one grant category, the number of Black applicants increased 65% to 703 applicants in 2020 compared with 425 in 2013. But white applicants by comparison were 19,919 in 2020 and 16,918 in 2013.” <<more>>

New EPA administrator: ‘Science is back’

The Washington Post by Brady Dennis and Dino Grandoni. Posted on March 15, 2021

“Michael Regan has bold aspirations, and a long to-do list, as President Biden’s newly confirmed

Environmental Protection Agency administrator.

“He wants to hasten the nation’s shift to cleaner forms of energy, make transformational investments in communities battered by decades of pollution, and improve air and water quality around the country. But to accomplish any of that, the 44-year-old administrator said Monday, he must first help the EPA get its groove back.

“We’ve got a lot of work to do, starting with rebuilding the staff morale and getting all of our staff back to feeling as if they matter, their voices matter,” Regan said in his first interview after being sworn in last week. “We really have to restore the scientific integrity and the utilization of data, of facts, as we move forward and make some very important decisions.” <<more>>

Europe moves to exclude neighbors from its quantum and space research

From *Science Magazine*, by Nicholas Wallace.
Posted March 11, 2021

“In a sign of growing national tensions over the control of strategic research, the European Commission is trying to block countries outside the European Union from participating in quantum computing and space projects under Horizon Europe, its new research funding program.

The proposed calls, which must still be approved by delegates from the 27 EU member states in the coming weeks, would shut out researchers in countries accustomed to full access to European research programs, including Switzerland, the United Kingdom, and Israel. European Economic Area (EEA) countries Norway, Lichtenstein, and Iceland would be barred from space research calls while remaining eligible for quantum computing projects.” <<more>>

Patent system often stifles the innovation it was designed to encourage

From *The Conversation* by Michael Meurer and Janet Freilich.

“Most technologies are developed by many

inventors over many years, a process called [“cumulative” innovation](#). Too often, however, early inventors get a patent on a small and perhaps insignificant piece of the technological puzzle, yet their patent covers the entire puzzle. Inventors who solve subsequent parts of the puzzle may need to pay royalties to the patentee, even if their contributions are larger.

As [legal experts](#) who focus on [technology law and policy](#), we suggest that the problem boils down to two issues: too many patents and too little accurate information about them.” <<more>>
