

Grant Opportunities & News You Can Use

Hello faculty,

As we leap into a new month (pun intended), we bring with us another issue of our monthly newsletter! This month, we bring to you a Featured Funder column that highlights a range of National Science Foundation (NSF) Opportunities. For our Sage Advice column, we share takeaways from a recent conversation with Dr. Mary Rocco, Director of Engaged Scholarship and Community Engagement in the Office of Community Engagement & Inclusion (CEI), who gives insight on how you can partner with the CEI for more impactful Broader Impact statements for NSF proposals. Our History of Philanthropy covers the life and philanthropy of John D. Rockefeller.

We have news stories and brief thumbnails of opportunities coming due in April. And in the back, we have six months’ worth of deadlines. (As always, check the website! Some of the later deadlines have not yet been released.) The next [internal grant deadline](#) for the 2023-2024 academic year is March 5th, 2024 for Faculty Research Grants managed by the Provost office.

Additionally, IFSR has officially launched a faculty survey to better understand your experiences and needs related to pursuing external grant funding. The brief 5-minute survey will be open through Friday, March 15th. We encourage all faculty, both full-time and part-time, to participate. Thank you to everyone who has already completed the survey, and if you haven’t gotten the chance yet, **you can take the survey [here](#)**.

As always, we will be hosting office hours where you can drop by on **Friday, March 8th, any time from 10-11** to pitch a project, get advice on funding, or just say hi. You can find us here:

Featured Funder: National Science Foundation Opportunities for Broader Impacts

The Broader Impacts criterion is an important component of NSF grant proposals, requiring grantseekers to describe how their research will benefit society and advance discovery beyond just the direct scientific merits. Some examples of broader impacts include broadening participation of underrepresented groups, enhancing infrastructure for research and education, disseminating results to enhance scientific and technological understanding, and benefiting society. Reviewers will assess both the broader impacts and intellectual merits when evaluating NSF proposals. Crafting a meaningful broader impact statement that is well-integrated with your research can set your NSF proposal apart, but it does not mean you need to reinvent the wheel in the ways you engage the community with your research findings and teachings. Our Sage Advice column for the month explores the ways you can partner with the Community Engagement and Inclusion office to strengthen the Broader Impacts of your projects, while this month's Featured Funder column highlights upcoming NSF opportunities, all which require thoughtful Broader Impacts considerations:

- ⇒ [EARly-Concept Grants for Exploratory Research \(EAGER\)](#): “EAGER is a type of proposal used to support exploratory work in its early stages on untested, but potentially transformative, research ideas or approaches. This work may be considered especially “high risk-high payoff” in the sense that it, for example, involves radically different approaches, applies new expertise, or engages novel disciplinary or interdisciplinary perspectives.” | **Funding**: up to \$300,000 for up to two years; **Deadline depends on the directorate**
- ⇒ [Responsible Design, Development, and Deployment of Technologies \(ReDDoT\)](#): “Supports research, implementation and education projects involving multi-sector teams that focus on the responsible design, development or deployment of technologies.” | **Funding**: Phase 1–\$300,000 for no more than 2 years, Phase 2–\$750,000–\$1,500,000 each for 3 years; **Deadline**: Phase 1–April 8, 2024, Phase 2–April 22, 2024
- ⇒ [Computer and Information Science and Engineering Research Initiation Initiative \(CRII\)](#): “Supports early-career scientists at non-Carnegie R1 institutions in computer and information science and engineering who lack access to organizational resources, enabling them to undertake exploratory research and develop collaborations and new approaches.” | **Funding**: \$175,000 for a period of 24 months; **Deadline**: September 18, 2024
- ⇒ [Law & Science \(LS\)](#): “Supports social scientific studies of the connections between law and law-like systems of rules, law and human behavior, as well as studies of how science and technology are applied in legal contexts...” | **Funding**: Varies; **Deadline**: August 1, 2024
- ⇒ [Decision, Risk and Management Sciences \(DRMS\)](#): “supports scientific research directed at increasing understanding and effectiveness of decision making by individuals, groups, organizations and society. DRMS supports research with solid foundations in theories and methods of the social and behavioral sciences. This social and behavioral science research should advance knowledge, address fundamental scientific and societal issues and have strong broader impacts;” | **Funding**: \$X; **Deadline**: August 19, 2024
- ⇒ [National Science Foundation \(NSF\) Faculty Early Career Development \(CAREER\) Program](#): The NSF CAREER program is one of the most prestigious (and competitive) awards in support of early-career faculty in the United States. It provides funding for five years to support research, education, and outreach activities that will build a foundation for a lifetime of leadership in these areas. | **Funding**: a minimum of \$400,000 for the 5-year duration; **Deadline**: July 24, 2024

Sage Advice: Best Practices for Community Engaged Scholarship & Broader Impacts— A Conversation with Dr. Mary Rocco

Community engagement that mutually benefits faculty scholarship, student learning, and local needs is an ongoing and important conversation at Barnard. This month, we sat down with Dr. Mary Rocco, Director of Engaged Scholarship and Community Engagement in the Office of Community Engagement & Inclusion (CEI). The office supports faculty and staff engaged with teaching or scholarship that involve external community partnerships. We highlight insightful "Do's and Don'ts" from our conversation with Mary that encourage and equip faculty at all career stages who seek meaningful community collaborations that make scholarship come alive. This may be of particular interest to faculty who are thinking about the Broader Impacts component of NSF applications!

The Do's and Don'ts:

- ⇒ **Do consider mutual benefits:** Mary emphasizes that effective community partnerships require mutuality, reciprocity, and respect between partners. She reminds faculty to recognize that both sides have assets to offer. Mary shares, "We're not approaching it from a deficit mindset that these community organizations, or the folks in these neighborhoods, need our help. [Rather] It's that we have resources, and they have strengths and how do we match and benefit our organization as well as their organization." This ethos of recognizing community strengths and acknowledging what community partners already bring to the table should drive community collaborations, and nurture stronger outcomes than if we work in silos.
- ⇒ **Don't assume you know what a community needs:** Mary cautions against presuming faculty expertise translates into understanding a community's needs and priorities. Even the best-intentioned ideas can inadvertently burden groups instead of empowering them. Effective engagement starts by asking questions, listening, researching what organizations already do, and designing collaboratively. If you're wondering where to start in learning more about a community partner's priorities, Mary advises first attending partner events, volunteering, and being sincere about building relationships. This relationship-building process may reveal that the collaboration is not an ideal fit, which is perfectly acceptable. Other times, it can be the foundation for impactful partnerships where both members' strengths are celebrated and leveraged for greater good.
- ⇒ **Do think of community engagement on a spectrum:** Mary emphasizes that "community engagement exists along a spectrum with varying degrees of involvement." Whether junior or senior faculty, full-time or part-time, there are many meaningful ways to connect courses and research to our broader Morningside, Harlem, and New York community, which helps students feel more invested in their learning and the broader city. Community engagement can span from long-term collaborative projects like co-developing a course, to hosting a guest speaker at an upcoming event.
- ⇒ **Don't miss out on an opportunity to partner with STEAM in the City (SITC) for Broader Impacts:** STEAM in the City connects Barnard resources to K-8 local teachers through a one-week Summer Institute and academic year workshops to help them integrate engaged STEAM curriculum in their Upper Manhattan classrooms. It is currently in an exciting season of partnering with high school teachers as well. Faculty seeking a project for NSF's Broader Impact section can get involved without recreating the wheel. By leading a SITC workshop or collaborating with educators, faculty have the potential to share their expertise with classrooms and even entire schools. SITC can pair professors with teachers to co-develop reusable lessons and materials on topics of shared passion and interest. Mary welcomes inquiries from faculty about tailoring these community partnerships to best serve their scholarly ambitions, whether broadening access for youth, empowering students, training teachers, or magnifying impact.
- ⇒ **Do reach out to CEI at any stage:** Whether in early partner development or designing an entire engaged course, Mary welcomes inquiries from faculty at any point. While many faculty seek support from CEI because they already have a relationship with a community partner, CEI can also help you identify potential partnerships, manage expectations around what those partnerships should look like, and share best practices for stewarding productive relationships. CEI can advise on logistics, co-plan events, and more. Regardless of where you are in your efforts to engage communities in your research, teaching, and practice, support is available across the spectrum! If you are interested in a consultation, please email Dr. Mary Rocco, mrocco@barnard.edu.

History of Philanthropy: John D. Rockefeller

In previous columns, I covered the beginning years of Andrew Carnegie, Russell Sage, and the fortunes that they left behind. I'll be returning to those foundations in future issues, but it wouldn't be a column about the history of (American) philanthropy if we didn't cover the richest and most controversial of all the Gilded Age tycoons: John D. Rockefeller.

Rockefeller's parents met in a chance encounter when his father, William Avery Rockefeller, was 27 and his mother, Eliza Davison, was 24. William was traveling through upstate New York posing as a "botanic physician" and selling elixirs that he claimed could cure cancer. As part of his con—and it was a con, one of many he pulled in his life—he arrived at the Davison house pretending to be deaf and dumb, only able to communicate by writing on a slate. He must have been extraordinarily charming or had spectacular handwriting, because after spending an evening with him, Eliza reportedly exclaimed, "If that man weren't deaf and dumb, I'd marry him." William's thoughts weren't recorded, but by all accounts, he was charmed less by the woman than by the \$500 her father promised upon marriage. The revelation that he had been lying about his disability apparently did nothing to deter her, and in 1837 the two wed.

It was an unhappy marriage. How could it be otherwise with a start like that? William Rockefeller was in love with his housekeeper and had a daughter with her in 1838, one year after his marriage to Eliza and the year their first child was born. Five more children followed (six, if you count his second child with his housekeeper mistress). John was born in 1839 and was the second of Eliza's children, as well as the oldest son.

William Rockefeller wasn't much better as a father than a husband, reportedly proclaiming, "I cheat my boys every chance I get. I want to make 'em sharp." In 1848, he did worse than cheat; he was charged with raping a woman at gunpoint. The family doctor was charged at the same time with assault and battery, with intention of also raping the woman, who worked in the Rockefeller household. William Rockefeller borrowed \$1,175 from his father-in-law for bail, moved the family to Oswego New York, and promptly disappeared.

He assumed the name Dr. Bill Levingston and eventually married a second woman in a bigamist marriage. He never entirely disappeared from John D.'s life, coming back at odd times to loan money to his son at a healthy interest rate or teaching his grandchildren how to shoot, but from 1849 onward, Eliza was effectively a single mother.

Eliza was as pious as William was scandalous, raising her son to be a devout Baptist and doing her best to create a stable home for her six children. Despite the upheaval of his home life, John D. Rockefeller was studious and serious, with a natural gift for doing complex math in his head. At 16, he started his first job, working as an assistant bookkeeper. Four years later, he used the money he had saved to form a produce company with two partners, borrowing a final \$1,000 from his father at 10% interest for the initial investment. The business was profitable almost immediately, but exploded when the Civil War started and the Union soldiers started demanding vast quantities of food and supplies.

John D. kept working through the Civil War, donating money to the Union cause and hiring a substitute soldier to fight in his stead. As the war wound down and the prospect of phenomenal profits in groceries dimmed, he decided it was time to switch careers to a more lucrative field.

Rockefeller was about to join the oil business.
